Project: Solent Innovation Centre
Client: Bouygues
Tonnage: 100 Tonnes
Location: Lee-On-Solent

This project involved the fabrication and erection of a new multi-purpose build for office space and workshop facilities. It was one of the first commissioned buildings on the new enterprise zone at Daedalus, a former M.o.D. site in Hampshire. The steel frame had three workshop spaces which branched away from the main frame, three plant room pods that sat above roof level and two entrance areas with large hollow steel section columns with a canopy.

The steelwork featured particular splice connections for the galvanised plant room area which had weathering cravats protecting the frame from the elements. A vast amount of cold rolled purlins covered each roof in turn for the final roof finish on the main frame and each of the workshop wings.
