Project: School Cricket Pavillion
Client: Edgar Builders
Tonnage: 50 tonnes
Location: Street

This development involved the design, fabrication and erection of a new cricket pavilion at a private school in Street, Somerset.

The design brief involved a first storey steel structure sat on top of a concrete slab to house the bar and dining area of the pavillion. The faceted roof beams give the pavillion its picturesque oval shape and the cell form rafters allow space for the services whilst maintaining the high ceiling.

We worked closely with Edgar Builders throughout the duration of the project and we delivered the project on time ready for its opening during the 2014/2015 academic year.
