Project: Plymouth Dive Centre
Client: Balfour Beatty
Tonnage: 130 tonnes
Location: Plymouth

This development involved the fabrication and erection of a new structure in Plymouth purposely designed around the activities for diving. The building is constructed at the sea front with direct access to a slipway for boats and personnel.

The building is split in to two areas with office type to one side and maintenance/work area the other. The building shape presented challenges with overhanging roofs and sloping exposed columns together with an exposed steel deck at the sea edge. The erection involved several areas of logistics which needed to be coordinated to allow deliveries, crane positions and construction to continue in line with tide times and inclement weather.
