Project: Yacht Haven Quay
Client: Midas
Tonnage: 360 tonnes
Location: Plymouth

This development involved the fabrication and erection of a new purpose designed yacht storage facility with both inside and outside facilities. The building is fully galvanized because of the close proximity to the sea and the construction is designed to be versatile so that the racking beams can be moved as required to suit the different sizes of yachts to be stored.

The building consists of a main steel frame with cladding to all elevations and a raised central curved roof area supported on curved cellular beams with high level windows to allow good natural light. The interior space is designed to be clear of any obstructions to allow access for the boat handling equipment.
